

## Withdrawal Performance - Modulation Peak service

Withdrawal Capacity for the Peak Modulation service.

Under the assumption that space made available to Users is completely filled, and taking into account Storage Hub's technical constraints concerning transportation capacity, Edison Stoccaggio defines the Withdrawal capacity for the modulation peak service, that the Customer can utilize in every Gas-Day during the withdrawal period.

**The contractual withdrawal capacity (CEcontr) is equal to Space/100.** For every day of every month of the Withdrawal Period, available  $PE_{MODP}$  is equal to the maximum daily capacity set in the table here below.

For the thermal year **2023/2024** the following tables set:

- *The percentage monthly volumes*
- *The maximum daily volumes*

### MAXIMUM WITHDRAWAL VOLUMES

PEAK MODULATION SERVICE	NOVEMBER - JANUARY(*)	FEBRUARY	MARCH	TOTAL
% withdrawal volumes	70,00%	19,60%	10,40%	100%

(\*)The above capacities are inclusive of withdrawal volumes required for the month of October

### MULTIPLYING - DEMULTIPLYING COEFFICIENTS (ADJUSTMENT FACTORS)

PEAK MODULATION SERVICE	NOVEMBER	DECEMBER - JANUARY	FEBRUARY	MARCH
FA	0,85	1	0,7	0,6

### MAXIMUM DAILY VOLUME

PEAK MODULATION SERVICE ( $PE_{MODP}$ )	NOVEMBER	DECEMBER - JANUARY	FEBRUARY	MARCH
$PE_{MODP}$	CEcontr * 0,85	CEcontr * 1	CEcontr * 0,7	CEcontr * 0,6

**Injection Performance**  $PI_{MODP}$  during Withdrawal Period (1st November 2023 - 31th March 2024) is equal to 9,444,500 kWh/d.

**Edison Stoccaggio reserves the right to update this document in accordance with new published provisions.**
